

This universal folding stand in a combination with module extensions is set for wide range of usage of special effects. The main advantage of the stand is a simple construction that enables quick assembly of different specially adjusted extensions, sufficient stability, easy manipulation and storage.

Stand in unfolded position

Segment with a clam joint

Firework effects – basic specification

We are introducing two firework effects – flashing and flame. These effects are designed for stage performances, interiors, arcades in chateaux etc.

Construction of firework effect: special firework composition placed in the barrel made of pressed paper where there is a fixed plug within its bottom part. The composition is activated by electric primer. Its 20 cm long wire is led out and held on the barrel girth. The upper part of the barrel is closed with a cover, which differs based on the type of effect. There is a label stuck on the barrel cover which stays the type of effect and its brief description.

Tyger's mine	colour	effect height/m	effect time /sec.
	Red	0,5-2	0,5
	Silver	0,5-1,5	0,5
	Red-Yellow	0,5-2	0,5
Tyger's Flame			
	Red	0,5-1,5	8
	Silver	0,5-1,5	3
	Red-Yellow	0,5-2	8

red - 1,5m / 8s
